

KILLER APPLETS

UPB Home Automation Control

Bathroom Buddy

BENEFITS

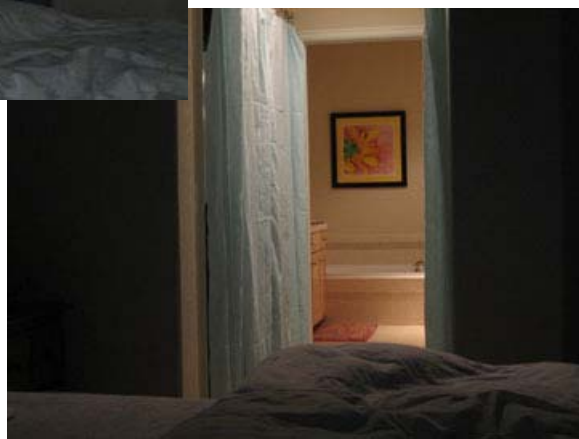

- **Safety**—Make those midnight trips to the bathroom with less risk of injury
- **Comfort**—Let your partner sleep when you need to get up in the early morning
- **Easily installed using:**
 - 1 or more dimming wall switch modules
 - 2 desktop controllers

Be safe even when necessity calls

MOST HOME INJURIES OCCUR AT NIGHT, especially when the call of nature arouses you from a peaceful sleep. Because many of us try to “feel” our way to the bathroom to avoid awakening our partner or shocking our own systems into a sleepless state, the most common household injuries involve sprained and broken arms and legs as a result of falling over a chair, footstool, dog, shoes etc.

WHAT IS A KILLER APPLETS?

“Killer App” is industry jargon for an application that persuades users to buy the system it runs on.

There is no single killer app for home control, but there are many Killer Applets — UPB-based applications that can satisfy your individual needs.

Take a look at our collection of Killer Applets and we think you’ll agree: home automation using UPB is the right choice to enhance the safety, security, and comfort of your home.

Lower your risk by installing one or more dimmers in the bathroom and a desktop controller on each side of the bed. Program the lights to come on at 20-30% when the appropriate button is pushed on the bedside controller. Now when it’s time to go you can do so in comfort and safety without disturbing your partner.
