

KILLER APPLETS

UPB Home Automation Control

Coffee Pot

BENEFITS

- **Convenience**—Have your coffee or tea ready when you rise
- **Safety**—Don't risk the horrible odor or even more serious consequences of leaving that pot on all day
- **Easily installed using:**
 - 1 appliance module
 - 1 UPB Timer

Have that brew ready when you awaken, with no worries about remembering to turn it off

IF YOU HAVE AN AUTOMATIC COFFEE MAKER

with a mechanical on/off switch, use UPB to have your coffee ready in the morning. Not only will that be an oh-so-convenient luxury, but you can use the same setup to make sure the coffee maker is never on later in the day. Plug the coffee maker into a UPB appliance module, then turn the coffee maker on. Now fill the water container with fresh water and the coffee basket with a fresh filter and freshly ground coffee. Set your UPB Timer to turn the machine on 10 minutes before you need your first cup.

WHAT IS A KILLER APPLETS?

"Killer App" is industry jargon for an application that persuades users to buy the system it runs on.

There is no single killer app for home control, but there are many Killer Applets — UPB-based applications that can satisfy your individual needs.

Take a look at our collection of Killer Applets and we think you'll agree: home automation using UPB is the right choice to enhance the safety, security, and comfort of your home.

To add to the convenience and enhance home safety, set the same timer to turn the coffee pot off later in the day.

Add functionality to this idea by programming one of the buttons on one or more of your wall-mount or desktop controllers to turn the coffee pot off. Now you have a manual over-ride to the timer so you can turn off the coffee machine from remote locations in the house whenever it suits you, reducing risk and saving energy at the same time
