

KILLER APPLETS

UPB Home Automation Control

Christmas Lights Control - II

BENEFITS

- **Convenience**—don't worry about forgetting to turn off Christmas lights before going to bed
- **Economic**—save money by turning off Christmas lights late at night
- **Ego**—One-up your neighbors by programming your lights to interact
- **Safety and Security**—house looks lived in while the homeowner is on vacation
- **Easily installed using:**
 - 1 Controlled outlet module
 - 1 Computer interface module
 - Intelligent controller or UPB Timer

Reduce the stress of the holidays with the help of intelligent light controls.

YOU STARTED planning the design and lay out of the lights long before Thanksgiving. You invested time and resources to showcase your house for the holidays. Now it is time to sit back, sip some eggnog and enjoy the fruits of your labor.

There is no need to worry about turning the lights on or forgetting to turn them off before bed. Simply plug your Christmas lights into a UPB controlled outlet in the garage. Then use the intelligent controller and its timer function to turn on the Christmas lights at a particular time in the evening, and off at another.

WHAT IS A KILLER APPLETS?

"Killer App" is industry jargon for an application that persuades users to buy the system it runs on.

There is no single killer app for home control, but there are many Killer Applets — UPB-based applications that can satisfy your individual needs.

Take a look at our collection of Killer Applets and we think you'll agree: home automation using UPB is the right choice to enhance the safety, security, and comfort of your home.
